## Across

2. Condition indicated when pruritis or frequent scratching is noted.
5. Difficulty breathing or dyspnea could be a sign of this condition.
6. Animals with a defined flora.
7. Any alteration of normal anatomy or physiology of an animal.
8. Last step in the euthanasia process.
9. Two \_\_\_\_\_ anesthetics used for anesthesia are isoflurane and halothane.
10. Advantages of using \_\_\_\_\_ for euthanasia are: rapid depressant and anesthetic properties, reasonably safe for the handler, and inexpensive.
13. Changes that can cause an animal to be stressed are: temperature, humidity, noise, overcrowding, lighting, ventilation or contaminants.
15. Organisms which cause disease.
17. Common signs that an animal may be sick are: diarrhea, hair coat problems, behavior changes and \_\_\_\_\_.
18. Temperature at which most lab animals are comfortable.
20. Getting animals tested for health status, vaccinated and treatment for obvious diseases is done during the \_\_\_\_\_ period.

## Across

21. Animal that harbors no detectable bacteria or viruses.
23. Acceptable method of euthanasia when tissues must be free of drug residue.
24. When an animal exhibits head tilt this could be a sign of \_\_\_\_\_.
25. Synonym for germ-free.

## Down

1. Parameters governed by the AWA when shipping animals: container size, access to food and water, container construction and \_\_\_\_\_.
3. Illness which does not make an animal appear sick.
4. Specific pathogen free
11. Research data may be compromised with animals that are stressed because they secrete higher levels of \_\_\_\_\_.
12. Small organism like a bacteria or a virus.
14. Getting newly arrived animals used to the environment.
16. What animals that may carry a variety of organisms are called?
19. Two factors that are just as important as the type of method used when euthanizing and animals are: \_\_\_\_\_ and skill of the technician.
22. Condition indicated when pale skin or mucous membranes are observed.
